

Good Societies Index 2012

Comparing Quality of Life in Relatively Wealthy Societies

Ron Anderson
University of Minnesota
rea@umn.edu

For Presentation at the
International Society for Quality of Life Studies
Venice, Italy, November 2, 2012

1

Background of the Good Society Index

- The Good Society Index was first constructed in 2009 for presentation at ISQOLS in Florence
- Good Societies Index 2012 has the following new features:
 - Expanded from 32 to 48 indicators
 - New emphasis on Social Cohesion
 - New future oriented emphasis with indexes on sustainability: social, economic, and environmental
 - Integration of concept of caring capital throughout
- Inclusion the BRIC (Brazil, Russia, India, and China) in some analyses

Conceptual Roots

- The notion of a good society stems from Aristotle and utilitarian philosophy in the West and thinking on social harmony and in the East
- In the past 3 decades, major new books began to explicate the concept of a good society, e.g.,
 - *The Good Society* by Robert Bellah and associates, 1991
 - *Next: The Road to the Good Society* by Amitai Etzioni, 2001
 - *The Good Society* by Alan Draper and Ansil Ramsay, 2008
- Etzioni advanced the construct by explicating the sociological community element and the moral core. The essence of the latter are community values that treat individuals as ends, thus recognizing the delicate balance between caring communities and individual autonomy.

December 22, 2012

Ron Anderson – rea@umn.edu

3

Building Blocks for Good Societies

- Many moral strategies and social values have been proposed as building blocks for good societies. Etzioni argues that all of these approaches need be considered in refinements in the evolving conceptions and practices of good societies.
- One of the most detailed approaches to delineating basic building blocks of good societies is the “human capabilities” approach of Amartya Sen and Martha Nussbaum. Their contribute includes
 - Physical well being
 - Civil and Political rights
 - Social justice

December 22, 2012

Ron Anderson – rea@umn.edu

4

Caring Capital

- The most critical, underdeveloped dimension of good societies is that of mutual caring. Recent work in that area by sociologists includes:
 - *Toward a Caring Society* by S. and P. Oliner
 - *Acts of Compassion* by R. Wuthrow
 - “Caring Capital” *Information, Communication and Society* by R. Anderson
- ‘Caring capital’ is that subset of social capital characterized by compassion, caring, and altruism when these actions are intended for the primary purpose of others’ well-being.
- The object of altruistic or caring capital is to avoid or reduce suffering of all human beings.
- For individuals & networks of communities to come to value caring capital would transform them into good societies.

December 22, 2012

Ron Anderson – rea@umn.edu

5

Caring Capital (cont.)

- Caring capital typically involves diverse types of informal giving of care not necessarily dependent upon formal exchanges of goods or services.
- Caring capital cross cuts both bonding and bridging capital.
- Caring capital can be institutional/organizational as well as individual.
- Good societies foster institutions that promote informal caring capital and create social policies that formalize caring capital activities and services.
- These principles are infused throughout the Good Society Index

December 22, 2012

Ron Anderson – rea@umn.edu

6

Methodological Roots

- Social Indicators movement; new journal in 1974
- [International Society for Quality-of-Life Studies](#) founded in 1996
- OECD World Forums on [Measuring the Progress of Societies](#)
- UNDP (Development Programme) Human Development Indexes (HDI) reporting project
- "Quality of Life" Index from the *Economist* magazine's [Economist Intelligence Unit](#)
- [Gallup Global Well Being](#) surveys in 155 nations
- Progress in combining three types of indicators:
 1. **Official government statistics, e.g., life expectancy**
 2. **Responses to international questionnaire surveys, e. g., attitudes**
 3. **Existing, published indexes with a narrow scope, e.g., "Free Press"**

December 22, 2012

Ron Anderson – rea@umn.edu

7

How we measure characteristics that reflect 'good societies?'

- 48 social indicators representing either processes or outcomes of good societies:
- These 48 indicators organized into 12 categories or components called indexes.

December 22, 2012

Ron Anderson – rea@umn.edu

8

Good Societies Index 2012

Twelve Components* (& Sample Indicators)

- 1 Economic Sustainability (*Income, inequality*)
- 2 Child Well-Being (*Often eating with parents*)
- 3 Safety (*Few homicides*)
- 4 Health (*Self-reported health, incidence of AIDS*)
- 5 Non-Violence (*Low arms exports*)
- 6 Integrity & Social Justice (*Corruption-free organizations*)
- 7 Civil Society (*Freedom of the Press*)
- 8 Compassion (*Caregiving time, also hosting refugees*)
- 9 Environmental Sustainability (*Emissions, renewables*)
- 10 Education (*Reading, graduation rates*)
- 11 Social Sustainability (*Subjective well-being, migration*)
- 12 Social Cohesion (*Trust, tolerance, union membership*)

December 22, 2012

Ron Anderson – rea@umn.edu

9

Countries in the Main Good Societies Index, 2012

The Twenty Most Affluent* Countries

Australia	Germany	Portugal
Austria	Ireland	Spain
Belgium	Italy	Sweden
Canada	Japan	Switzerland
Denmark	Netherlands	United Kingdom
Finland	New Zealand	United States
France	Norway	

*These were the most affluent countries in 2009, after eliminating countries with populations under 3 million.

** The BRIC (Brazil, Russia, India, and China) added in some analyses.

December 22, 2012

Ron Anderson – rea@umn.edu

10

Calculation of the Good Societies Index

Steps

1. Locate the statistic (e.g., % or mean) for each country for any given indicator
2. Calculate standard scores (z-scores) by subtracting each country statistic, x , from the mean of all countries, and dividing the result by the standard deviation of all countries
3. Re-standardize each z-score to give each set of scores a mean of 100 and a standard deviation of 15, just like an intelligence test score
4. After this is done for all the indicators in a component set, e.g., health, then the mean of all non-missing scores is calculated for each country, to produce the component index score.
5. The Good Societies (overall) Index is the mean for each country across all eight component scores.

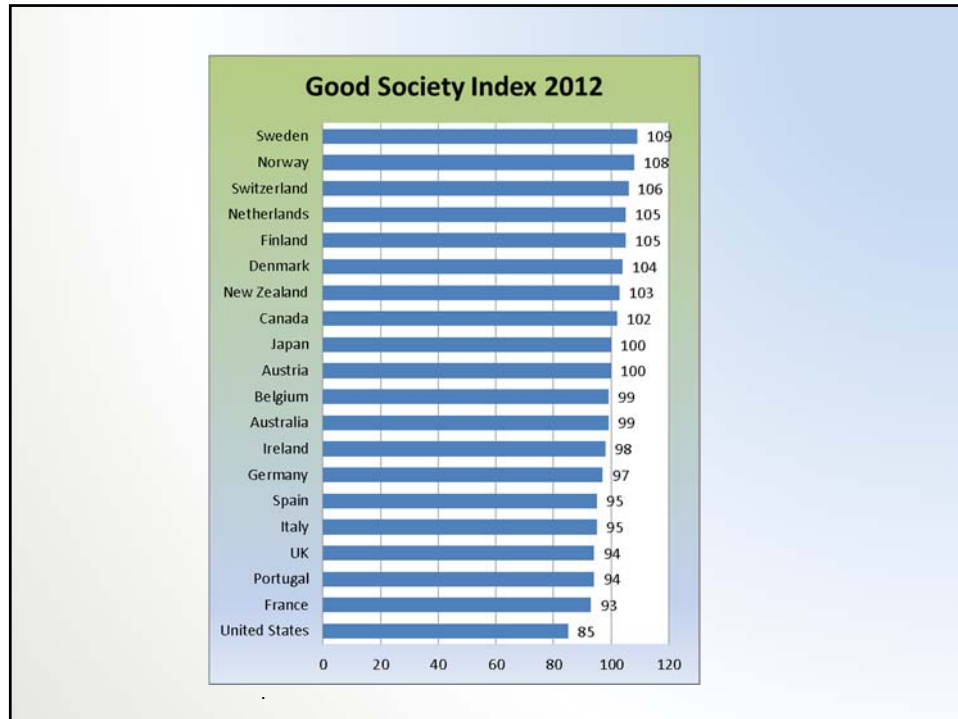

December 22, 2012

Ron Anderson – rea@umn.edu

**Country Tiers below are Based upon Rankings on the
Good Society Index and the Similarity of
Inter-correlations among 12 Index Components**

<u>Top Tier</u>	<u>Middle Tier</u>	<u>Bottom Tier</u>
Sweden	Japan	United States
Norway	Australia	United Kingdom
Finland	Canada	France
Switzerland	Germany	Spain
Netherlands	Austria	Portugal

Note: The remaining countries are all in Europe & fall into the Middle Tier.

1 Economic Sustainability Indicators

Indicator	Data Used	Source
Inequality-adjusted income	Income downgraded for inequality	OECD. <i>Society at a Glance, 2011.</i>
Low Adult Poverty	Percent below 50% of median income (reversed*)	UN Dev. Program, Human Development Report, 2011
Employment	Working portion of working eligible in ages 15-64	OECD Employment Outlook, 2011
Technology Innovation Policies	Adjusted for global impacts	Center for Global Development, 2011

*Reversed means to make larger values lower on a scale and vice versa. For example, subtracting a percent from 100, reverses the values.

December 22, 2012

Ron Anderson – rea@umn.edu

15

1 Economic Sustainability Index

2 Child Well-Being Index Indicators

Indicator	Data Used	Source
Low child poverty	Percent of children living below poverty line (reversed*)	OECD <i>Growing Unequal</i> 2008
Low percent living in single-parent families	Percent of children age 11, 13,15 in single-parenting (rev.*)	OECD Family Database, mid-2000s
Low % of children often eating evening meal with parents	Age 15 self-report (reversed*)	UNICEF <i>Innocenti Report Card</i> , 2007 and OECD PISA
Few births to teens	Births per 1,000 mothers age 15-19 (reversed*)	OECD, <i>Society at a Glance</i> , 2011

*Reversed means to make larger values lower on a scale and vice versa.

December 22, 2012

17

Child Well-Being Index

3 Safety Index Indicators

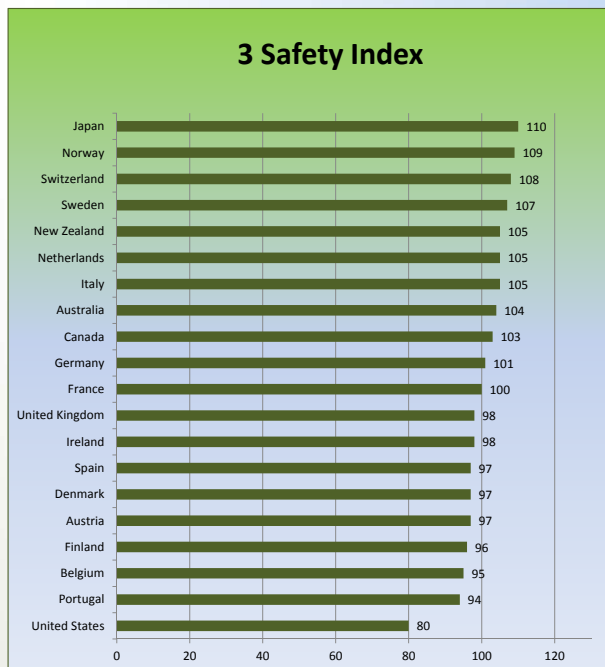

Indicator	Data Used	Source
Low homicide rate	Homicide rate (reversed)	UN Office on Drugs and Crime, 2010
National Security Index	Index of Aid to Developing Countries, 2009	Center for Global Development, Commit. To Development Index
Life Expectancy	Total Life Expectancy at birth	OECD, <i>Health Database, 2010.</i>
Few road fatalities	Road fatalities per million population (reversed)	OECD, <i>Factbook, 2008.</i>

December 22, 2012

Ron Anderson – rea@umn.edu

19

3 Safety Index

December 22, 2012

20

4 Health & Healthcare Indicators

Indicator	Data Used	Source
Self-reported good health	Life expectancy at birth, 2007	OECD <i>Society at a Glance</i> , 2011.
Low incidence of AIDS	AIDS rate (reversed)	OECD, <i>Health at a Glance</i> , 2009
Low obesity	Percent obese age 15+ (reversed)	OECD <i>Factbook</i> , 2010.
Low avoidable hospital admissions for congestive heart failure (CHF)	Avoidable admissions for CHF (reversed)	OECD, <i>Health at a Glance</i> , 2009

December 22, 2012

Ron Anderson – rea@umn.edu

21

4 Health & Healthcare Index

5 Non-Violence Index Indicators

Indicator	Data Used	Source
Contributions to peace	Index of Contributions to Global Peace	Economist Intelligence Unit, 2008
Low Total Armed Forces per capita	Total Armed Forces per capita (reversed)	The Military Balance, 2010
Low defense spending per person	Per capita spending for defense in 2008 (reversed)	The Military Balance, 2010
Low arms exports per person	Arms exports per capita, 2009 (reversed)	Stockholm Int'l Peace Research Institute, 2010

December 22, 2012

Ron Anderson – rea@umn.edu

23

6 Integrity & Justice Indicators

Indicator	Data Used	Source
Corruption-free organizations	Corruption Perceptions Index, 2009	Transparency International
Corporate Social Responsibility	Index of Corporate Social Responsibility	<i>Scand. J. of Management</i> 25 (2009), 10-22.
Protection of Citizens from Surveillance	International Privacy Index	Privacy International, 2007
Low prison populations	Prisoners per 100,000 persons in 2009 (reversed)	OECD <i>Society at a Glance</i> , 2011

December 22, 2012

Ron Anderson – rea@umn.edu

25

Integrity & Social Justice Index

7 Civil Society Index Indicators

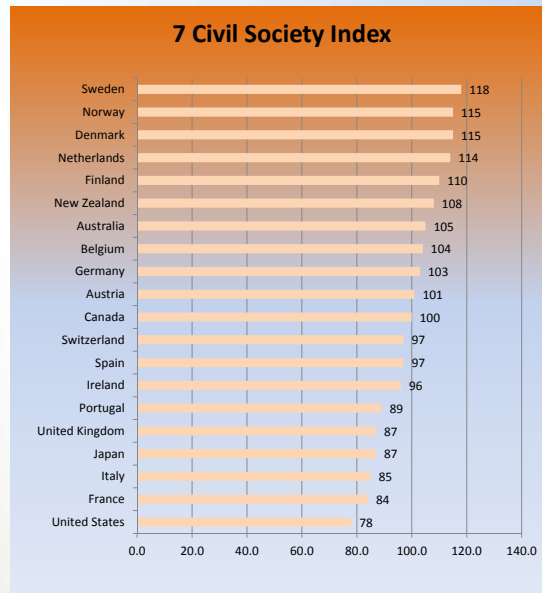

Indicator	Data Used	Source
Democracy Index	Democracy rating by nation	Economist Intelligence Unit, 2008
Turnout in national elections	Percent voting in most recent parliamentary/congressional elections	International Institute for Democracy and Electoral Assistance, 2010
Freedom of the press	Index of Freedom of the Press	Freedom House, Global Press Freedom, 2009
Women members of Parliament/Congress	Percent of members who are women in 2011 or earliest year	UNDP (2011), <i>Human Development Report 2011- Sustainability and Equity: A Better Future for All.</i>

December 22, 2012

Ron Anderson – rea@umn.edu

27

7 Civil Society Index

8 Compassion Index Indicators

Indicator	Data Used	Source
Kindness & helpfulness of peers	Percent of children age 11, 13, 15, who reported kind peers	Health Behavior of School age Children study, 2001
Refugees hosted per citizen	Refugees hosted per 1,000 citizens	UM Refugee Agency Statistical Yearbook, 2008
Government aid to developing countries	Index of Aid to Developing Countries, 2009	Center for Global Development, Commit. To Development Index
Caregiving minutes per day	OECD	OECD (2011), Society at a Glance 2011

December 22, 2012

Ron Anderson – rea@umn.edu

29

One indicator is amount of "Aid to Developing Countries"

The index takes into account the quality as well as quantity of the aid given. For instance, military aid is weighted much less than unencumbered economic assistance.

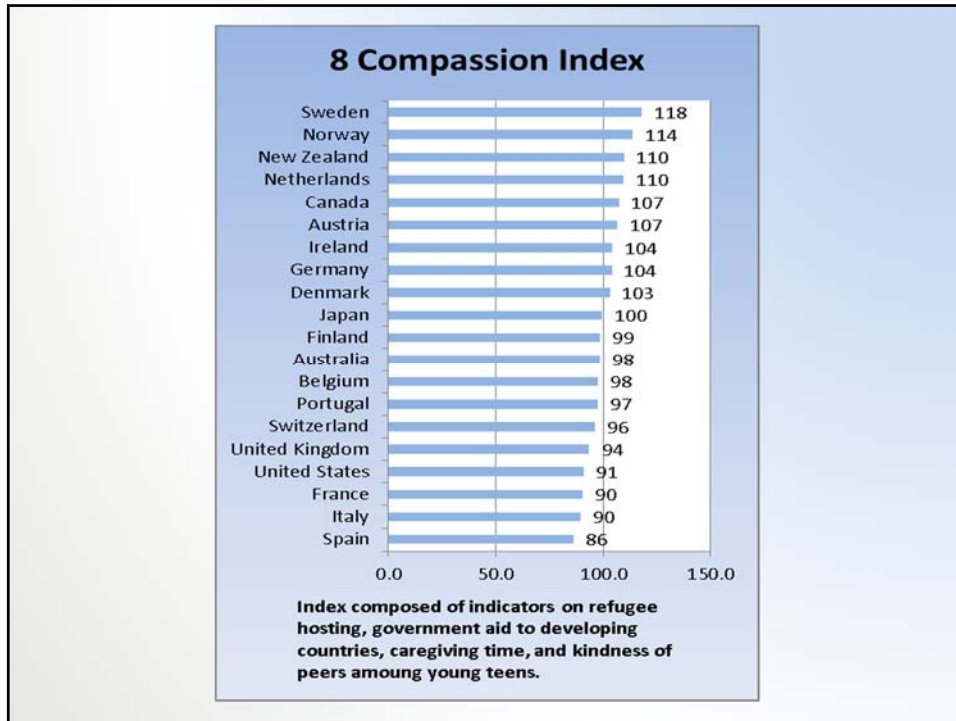

8c. Index of Aid to Developing Countries

December 22, 2012

Ron Anderson – rea@umn.edu

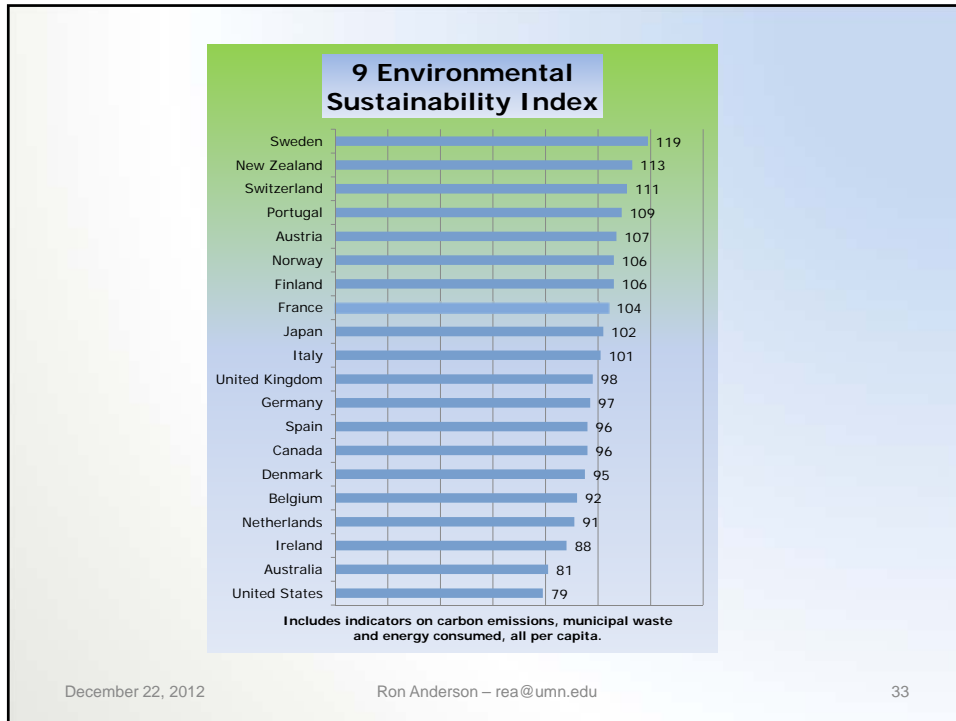

30

9 Environmental Sustainability Index

Indicator	Data Used	Source
Low Carbon Dioxide Emissions	Tons per capita (reversed)	UNDP <i>Human Development Report, 2011</i> .
Environmental Performance Index.	UNDP Composite Index	UNDP <i>Human Development Report, 2011</i> .
Low Municipal Waste per capita	Municipal waste per capita in 2005 (reversed)	OCED Factbook 2008.
Renewables share of energy	Government social expenditures in 2005	OECD (2011), <i>Society at a Glance 2011</i>

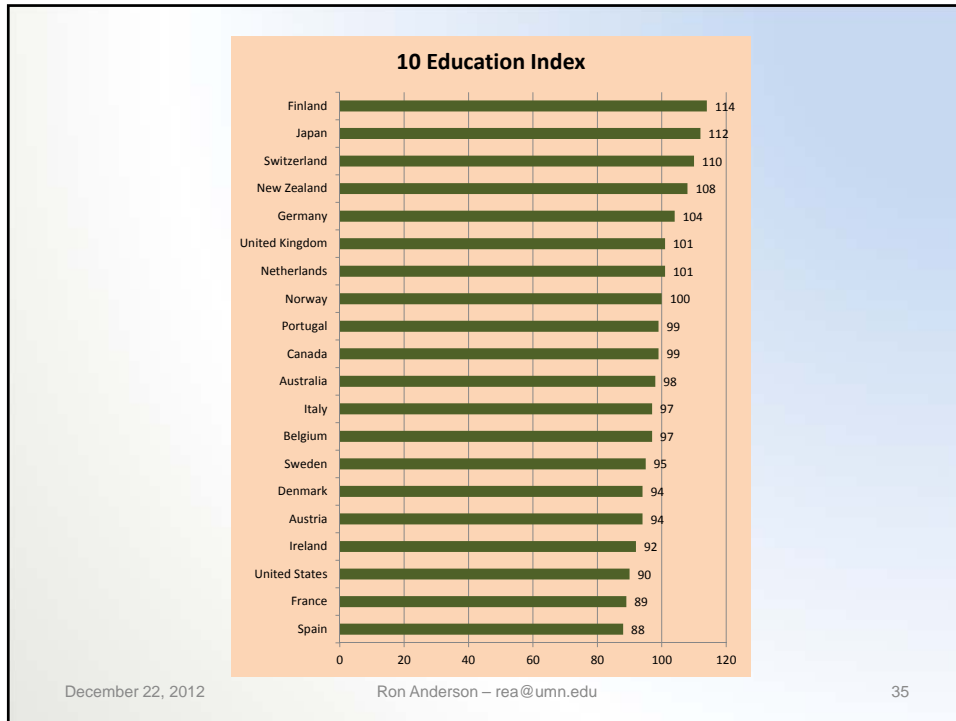

December 22, 2012 Ron Anderson – rea@umn.edu 32

10 Education Index Indicators

Indicator	Data Used	Source
Upper Secondary School Graduation Rates	Percent of children age 11, 13, 15, who reported kind peers	OECD (2011) <i>Education at a Glance, 2011</i>
Adult Education Participation Rates	Adults 25-64 who enroll at any educational level	OECD (2011) <i>Education at a Glance, 2011</i>
Reading Competencies	PISA assessment of 15-year olds in 2009	OECD (2011) <i>Society at a Glance, 2011</i>
Teacher salary levels	Ratio of teacher salary to GDP per capita	OECD (2011) <i>Education at a Glance, 2011</i>

December 22, 2012 Ron Anderson – rea@umn.edu 34

11 Social Sustainability Index

Indicator	Data Used	Source
Sustainable Society Index	Sustainable Society Foundation, 2012	http://www.ssfindex.com/
Public Confidence in Social Institutions	Question from Gallup World Poll 2010	OECD (2011) <i>Society at a Glance, 2011</i>
Economist's Quality of Life Index	Composite Index 2005	Economist Intelligence Unit
Migration Inflow	Government social expenditures in 2005	OECD <i>Factbook, 2010</i>

December 22, 2012 Ron Anderson – rea@umn.edu 36

Social Sustainability

- Is social process and institution focused, designing strategies and tactics toward desired futures.
- Emphasizes the inter-relatedness of environmental and economic systems in social functioning
- Is future focused, defining desired states, goals and meanings
-

December 22, 2012

Ron Anderson – rea@umn.edu

37

11 Social Sustainability Index

December 22, 2012

Ron Anderson – rea@umn.edu

38

12 Social Cohesion Indicators

Indicator	Data Used	Source
Trust	Percent of adults who self-report trust	OECD (2011) <i>Society at a Glance, 2011</i>
Tolerance of community diversity	Percent who say their community is good place for various minorities	OECD (2011) <i>Society at a Glance, 2011</i>
Union Membership	Union members as percent of employed in 2002	Lesch (2004) (see footnotes)
Families or domestic partnerships	Government social expenditures in 2005	OECD (2011) <i>Society at a Glance, 2011</i>

December 22, 2012

Ron Anderson – rea@umn.edu

39

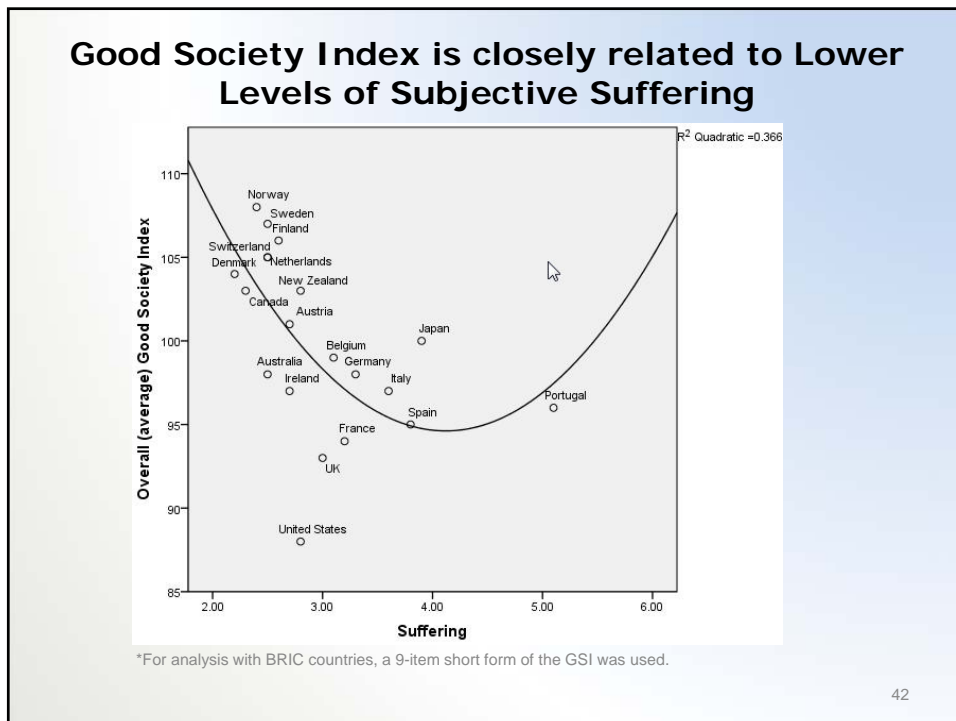

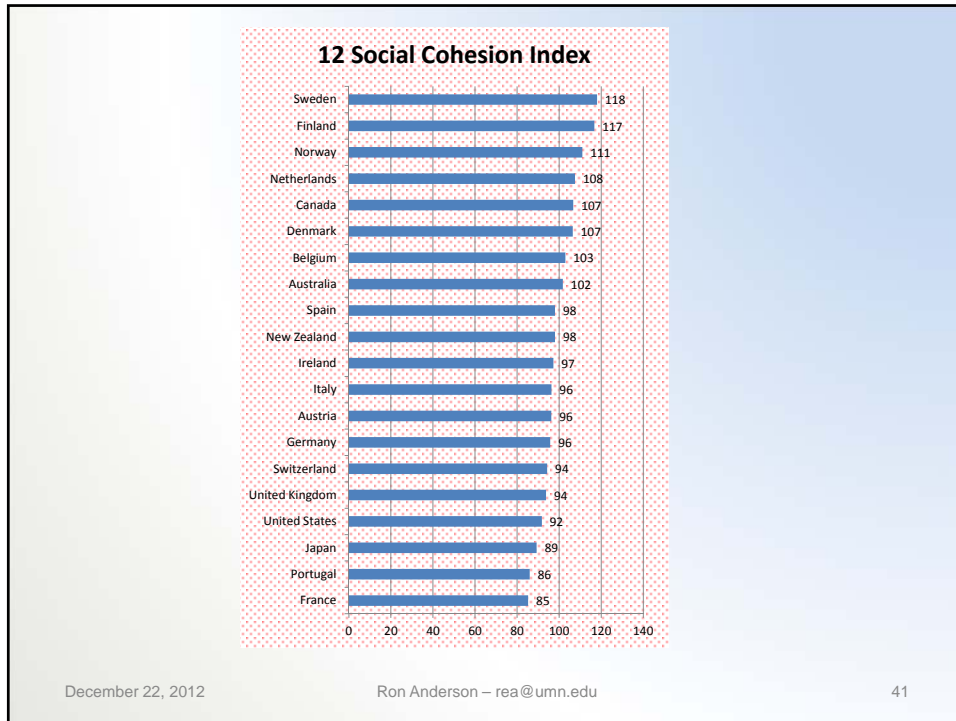

Conceptual framework: The Social Cohesion “Triangle”

December 22, 2012

Ron Anderson – rea@umn.edu

40

Good Society Index and Suffering including BRIC (Brazil, Russia, India, & China)

December 22, 2012 *For analysis with BRIC countries, a 9-item short form of the GSI was used.

43

Good Society Index* compared to the UNDP Human Development Index 2011

*For analysis with BRIC countries, a 9-item short form of the GSI was used.

44

Conclusion 1 of 4

- a) Quality of life differences among affluent societies obviously can not be explained by economics (wealth or income) alone. The meaning of others to members of a society underlies the functioning of 'good societies.'
- b) How people view their responsibilities for each other and their commitment for caring capital and compassionate action shapes the distribution of well-being in societies.

Ron Anderson – rea@umn.edu

45

Conclusion 2 of 4

- a) Consistent with numerous comparative analysts (such as Lindert (2004), Pontusso (2005), and Kenworthy (2004)) the Nordic countries topped the Good Societies Index.
- b) Countries like the USA, where neo-liberal economics predominate, did very poorly on all dimensions of the Index. One can point to the weakness of several of the indicators, but it is difficult to dismiss the overall profile of the results.
- c) **These results confirm that it is not necessary for an affluent society to be an individualistic, anti-government society.**

Ron Anderson – rea@umn.edu

46

Conclusion 3 of 4

- a) It may be surprising to some that the United States falls at or near the bottom of each of the eight 'Good Societies' dimensions. Furthermore, on prison rates, obesity, murders, and defense spending, the USA is not just higher, but two to three times higher than the next highest nation.
- b) These measures of national character were not arbitrarily selected, but chosen to reflect the 'good society' framework.
- c) While critics might argue for selection of different indicators, these results shown here give cause to pause and reflect on how countries like the USA, at the low end of the Good Society Index, could change course and improve the well-being of all its citizens.

December 22, 2012

Ron Anderson – rea@umn.edu

47

Conclusion 4 of 4

- a) Most of the 20 most affluent countries clustered around the middle range of the continuum of indicators for the 'Good Society'. The fact that few of the countries scored at extremely high points on the indicators suggests how challenging it is for a rich society to become or remain a 'Good Society.'
- b) We who enjoy the comfort of living in these 'rich' societies should not forget about the many millions who live with us but struggle daily from homelessness, discrimination, and even hunger.
