

Soc 8590:
Work, Health, and Well-Being
Fall 2004

11:45-2:15 Mondays

Room: 1114 SST

Instructor

Phyllis Moen

phylmoen@umn.edu

Office Hours:

1123 SST

Mondays: 10:00 - 11:00

Tuesdays: 10:00-11:00

Course Description and Goals:

This class introduces perspectives on the life course in relation to work, mental and physical health, and gender. We focus on three broad themes. The first theme is that occupational and organizational structures and interactions around work promote health and illness. The second theme is that this is a dynamic, recursive process, producing and reproducing disparities in health and health-related resources. The third theme is that the work-health interface, the social organization of work and of health-care, and strategic patterns of self-care vary across time and culture. Specific goals are:

- To introduce major theories and perspectives on health and work over the life course. This introduction will draw from life course sociology, life span psychology, and the epidemiology of health and illness.
- To review research evidence on work and health, including mental health.
- To demonstrate ways epidemiologists, sociologists, and psychologists measure well-being, mental disorder, psychological distress, chronic and acute illness onset, life events and chronic difficulties, daily hassles, social support and social integration, and coping and appraisal of stressors.
- To discuss major methodological and theoretical challenges in this area of research.
- To lay out important “next steps” in developing a work, health, and well-being research agenda.

Class participants will gain a broad overview of the topic area, as well as the challenges introduced by incorporating the life course (as time, structure, and context) into the study of work and the mental and physical well-being of men and women. The life course reflects the complex interplay between:

- *Biological time*, including physical and cognitive development and age-related health trajectories;

- *Biographical time*, involving social and institutional clocks, career paths, role entries, and pathways and exits, along with changes in resources, risks, and relationships—all of which relate to health;
- *Subjective time*, identity, motivation, and cognitive assessments as people move into and through educational, occupational, family, community and retirement pathways – in shifting social contexts and in tandem with significant others;
- *Institutional time*, including public and organizational clocks, as well as policy regimes related to norms of timing, sequencing, and duration of role entries, exits, and trajectories -- the social organization of age, gender, health-related behaviors, and health care;
- *Historical time*, including demographic, organizational, economic, and cultural change, unanticipated events, the environment, and the links between *individuals* and *institutions* as they play out in historical and organizational contexts.

Course Requirements:

Class participants will read and discuss the required materials in light of the course goals as well as whatever expertise they may bring to this class.

Participants will actively engage in this spirit of inquiry, including leading the discussion from time to time. Other expectations:

- Write and present a paper providing either a *broad overview* or investigating a *specific substantive topic* (This could be the investigation of specific occupational or organizational career paths, their relationship to stress or other outcomes; a literature review of a particular health-related construct, theory, moderator or mediator); or a *broader macro-level focus* on the social construction and policy development of health behaviors, health-related institutional arrangements, health inequalities, and/or the culture around health risks, behaviors, and definitions. There will be three graded assignments related to this paper:
 1. a short literature review paper (10-15 pages) on a topic related to your final project,
 2. an oral presentation on your final project,
 3. the final written project.
- Provide written and oral feedback to at least one other student.
- Participants will also be evaluated on weekly class discussion participation.

Course Plan:

Week 1

Monday, September 13th

Concepts and Definitions: Work, Health, and Well-Being

1. Introduction to the course.
2. What is the distinction between the terms "life course" and "life span"?
3. What do we mean by "work"? "health"?
